

The Mandate: Operating at the Core of the Firm

Finance

Risk

Treasury

Regulatory Reporting

Corporate Technology: The structured backbone integrating firm-wide capabilities.

The Scale

Millions of daily trades

Unified ledger logic

The Requirement

Translating extreme product complexity into accurate, real-time, and auditable financial realities.

The 6-Layer System Architecture

Pillar 1: Profit & Loss (P&L) Management

Daily calculation of trading and banking P&L, explaining exactly why numbers changed based on market moves, trades, or FX.

Key Capabilities & Metrics

- ✓ - Trade capture ingestion
- ✓ - Market data alignment
- ✓ - P&L calculation engines
- ✓ - Flash vs. official P&L
- ✓ - Adjustments (reserves, accruals)

The Tech Stack

[Murex]

[Calypso]

[FIS Front Arena]

[In-House Distributed P&L Engines]

Pillar 2: Balance Sheet & Ledger Management

Firm-wide accounting architecture enforcing double-entry logic, reconciling positions, cash, and entries across all legal entities.

Key Capabilities

- ✓ - Sub-ledger accounting (trade-level)
- ✓ - General ledger consolidation
- ✓ - Intercompany accounting
- ✓ - Reconciliation frameworks

The Tech Stack

[SAP S/4HANA Finance]

[Oracle Cloud ERP]

[Workday]

[Custom In-House Sub-ledgers]

Pillar 3: Capital & Liquidity Management

Capital Management

Optimizing capital usage and calculating regulatory requirements.

Key Frameworks:

- Basel III / IV
- RWA (Risk Weighted Assets)
- CET1 Ratios

[AxiomSL]

[Moody's Analytics]

[SAS Risk]

Liquidity Management

Ensuring short-term obligations are met and monitoring funding buffers.

Key Metrics:

- LCR (Liquidity Coverage Ratio)
- NSFR (Net Stable Funding Ratio)

Tech Stack:

[FIS Treasury]

[ION Group]

[Kyriba]

[In-House Engines]

Pillar 4: Regulatory Reporting & Stress Testing

Regulatory Reporting

Producing compliant reports for regulators globally.

- Outputs: FR Y-9C, COREP/FINREP
- Capabilities: Rule interpretation, lineage, and generation.

Stress Testing & Scenario Analysis

Simulating extreme market conditions to assess capital resilience.

- Outputs: CCAR, Risk factor shocks, internal Monte Carlo.

Shared Tech Stack:

[AxiomSL]

[Wolters Kluwer OneSumX]

[Oracle FSAA]

[SAS]

The Foundation: Data & Controls

The Mandate

Ensuring every byte of data is accurate, consistent, and fully auditable from trade execution to final regulatory report.

Core Capabilities

- Ingestion (trades, market data)
- Data quality gating
- Lineage & traceability
- Automated reconciliation

Modern Data Stack

[Snowflake]

[Databricks]

[Informatica]

[Collibra]

The 30/70 Split: The In-House Engineering Edge

Dimension	Vendor Tools	In-House Platforms
Product Complexity	Struggles with bespoke derivatives	Built for highly structured, exotic trades
Speed & Latency	Batch-heavy, T+1 cycles	Near-real-time streaming aggregation
Integration Depth	Siloed point solutions	Native tight integration across risk & finance
Regulatory Agility	Dependent on vendor roadmap	Rapid adaptation to constantly changing rules

Vendor tools handle ~30% of standard workflows. The ~70% in-house platforms provide the core competitive differentiation.

The Engineering Translation

Trade lifecycle, RWA, & Greeks

Massive Calculation Grids
(Distributed compute processing complex financial schemas)

Real-time P&L & Risk Sensitivities

High-Throughput Data Pipelines
([\[Kafka\]](#), [\[Spark\]](#), [\[Flink\]](#) handling streaming data)

Double-entry Accounting & Audit Lineage

Reconciliation Frameworks & APIs
(Immutable data stores, control systems, and APIs for finance consumers)

The Unified Corporate Technology Ecosystem

A singular, layered architecture translating extreme market complexity into clear, real-time, and auditable financial realities.

This is the backbone of the modern firm.
